

- ✚ 'Fatherhood Community Solutions' (FCS) CIC is a community organisation whose primary objective is to promote inclusion and access for fathers, carers and men. We at FCS identified that there is a significant gap within the community of organisations available to support and promote the needs of this group.
- ✚ Our aim is to offer a range 'non-clinical' services that are not readily or easily available in the community currently. Offering practical support in regards to our service users' overall wellbeing, which can help towards positively

affecting their roles as co-parents and the lives of their child/ren.

- ✚ This includes the management of risk and the likelihood of father, carer-child relationship breakdown. All of which puts them at a higher risk of experiencing distress and can potentially impair their ability to be supportive caregivers.
- ✚ Whatever circumstances our service users' face, this period can be tough on their mental health, current domestic conflict and financial stress that can worsen a father and or carer's mental health.
